Duration 23 mins 22 secs

Marks 48.34/49.00

Grade 98.66 out of 100.00

Question 1

Complete

Mark 14.00 out of 14.00

Lenkapi Coding dibawah ini:

```
class Buku {  
  
    private String judul;  
    private String penulis;  
  
    Buku(String judul, String penulis) {  
  
        this.judul = judul ;  
  
        this.penulis = penulis ;  
  
    }  
  
    public String getJudul() {  
  
        return judul ;  
  
    }  
  
    public String getPenulis() {  
  
        return penulis ;  
  
    }  
}  
  
class Perpustakaan {  
  
    private Buku [] koleksi;  
  
    Perpustakaan (int kapasitas) {  
  
        this.koleksi = new Buku [kapasitas];  
  
    }  
  
    public void tambahBuku(int index, Buku b) {  
  
        koleksi[index] = b ;  
  
    }  
}
```

```
public void cetakKoleksi () {  
  
    for(int i=0; i< koleksi.length; i++) {  
  
        if(koleksi[i] != null) {  
            System.out.println(koleksi[i].getJudul() + " - " + koleksi[i].getPenulis());  
        }  
    }  
}  
}
```

```
public class TestArray {  
    public static void main(String[] args) {  
  
        Perpustakaan p = new Perpustakaan (3);  
  
        p.tambahBuku(0, new Buku ("Laskar Pelangi", "Andrea Hirata"));  
  
        p.tambahBuku(1, new Buku("Negeri 5 Menara", "Ahmad Fuadi"));  
        p.tambahBuku(2, new Buku("Bumi Manusia", "Pramoedya Ananta Toer"));  
  
        p.cetakKoleksi();  
    }  
}
```

kemungkinan output:

```
Laskar Pelangi - Andrea Hirata  
Negeri 5 Menara - Ahmad Fuadi  
Bumi Manusia - Pramoedya Ananta Toer
```

Question 2

Complete

Mark 6.34 out of 7.00

Lengkapi kode berikut agar program tentang jenis buku dapat berfungsi dengan benar. Perhatikan penggunaan class **abstrak**** dan ****anggota static****.**

```
abstract class Book {
```

```
    protected String title;
```

```
    protected String author;
```

```
    protected double price;
```

```
    public Book(String title, String author, double price) {
```

```
        this.title = title ;
```

```
        this.author = author ;
```

```
        this.price = price ;
```

```
    }
```

```
    public String getTitle() {
```

```
        return title ;
```

```
    }
```

```
    public String getAuthor() {
```

```
        return author ;
```

```
    }
```

```
    public double getPrice() {
```

```
        return price ;
```

```
    }
```

```
    public void setPrice(double price) {
```

```
        this.price = price ;
```

```
    }
```

```
// metode abstrak
```

```
public abstract double ();
```

```
public String (){  
    return "Book [Title=" + title + ", Author=" + author + ", Price=" + price + "];"  
}  
}
```

```
class  extends  {
```

```
    private int pages;
```

```
    private static int totalBooks = ;
```

```
    public  (String title, String author, double price, int pages) {
```

```
        super(title, author, price);
```

```
        this.pages = ;
```

```
        ;
```

```
    }
```

```
    public int getPages() {
```

```
        return ;
```

```
    }
```

```
@Override
```

```
public double getDiscountPrice() {
```

```
    return getPrice() * ;
```

```
}
```

```
public static int getTotalBooks() {
```

```
    return ;
```

```
}
```

```
@Override
```

```
public String toString() {
```

```
    return "PrintedBook [Title=" + getTitle() + ", Author=" + getAuthor() +
```

```
        ", Price=" + getPrice() + ", Pages=" + pages + "];"  
    }  
}
```

```
class EBook extends Book {  
  
    private double fileSize;  
    private static int totalEBooks = 0;  
  
    public EBook(String title, String author, double price, double fileSize) {  
        super(title, author, price);  
        this.fileSize = fileSize;  
        totalEBooks++;  
    }  
  
    public double getFileSize() {  
        return fileSize;  
    }  
  
    @Override  
    public double getDiscountPrice() {

            ", Price=" + getPrice() + ", FileSize=" + fileSize + "MB]";  
    }  
}
```

```
public class Main {
```

```
public static void main(String[] args) {  
  
    Book pb1 = new PrintedBook("Java Basics", "Dewi Kode", 100000, 300);  
  
    Book pb2 = new PrintedBook("Struktur Data", "Rina Tech", 120000, 280);  
  
    Book eb1 = new EBook("OOP Advanced", "Budi Logic", 90000, 4.5);  
  
  
    System.out.println(pb1);  
    System.out.println("Harga diskon: " + pb1.getDiscountPrice());  
    System.out.println(pb2);  
    System.out.println("Harga diskon: " + pb2.getDiscountPrice());  
    System.out.println(eb1);  
    System.out.println("Harga diskon: " + eb1.getDiscountPrice());  
    System.out.println("Total buku cetak: " + PrintedBook.getTotalBooks());  
  
    System.out.println("Total e-book: " + EBook.getTotalEBooks());  
  
}  
}
```

OUPUT

```
PrintedBook [Title=Java Basics, Author=Dewi Kode, Price=100000.0, Pages=300]  
Harga diskon: 80000.0  
PrintedBook [Title=Struktur Data, Author=Rina Tech, Price=120000.0, Pages=280]  
Harga diskon: 96000.0  
EBook [Title=OOP Advanced, Author=Budi Logic, Price=90000.0, FileSize=4.5MB]  
Harga diskon: 81000.0  
Total buku cetak: 2  
Total e-book: 1
```

Question 3

Complete

Mark 28.00 out of 28.00

Perhatikan gambar UML berikut ini.

Silahkan lengkapi coding berikut berdasarkan UML diatas.

```
class Book {

    private String title = "Unknown";

    private String author = "Anonymous";

    private double price = 0.0;

    public Book () {}

    public Book (String title, String author, double price) {

        this.title = title ;

        this.author = author ;

        this.price = price ;

    }
```

```
public String getTitle() {  
    return title;  
}
```

```
public void setTitle(String title) {  
    this.title = title;  
}
```

```
public String getAuthor() {  
    return author;  
}
```

```
public void setAuthor(String author) {  
    this.author = author;  
}
```

```
public double getPrice() {  
    return price;  
}
```

```
public void setPrice(double price) {  
    this.price = price;  
}
```

```
public String toString() {  
    return "Book [Title=" + title + ", Author=" + author + ", Price=" + price + "];"  
}  
}
```

```
class EBook extends Book {  
    private double fileSize = 0.0;  
    private String format = "PDF";  
  
    public EBook() {
```

```
        super();
    }

    public EBook (String title, String author, double price, double fileSize, String format) {

        super(title, author, price);
        this.fileSize = fileSize;
        this.format = format;

    }

    public double getFileSize() {
        return fileSize;
    }

    public void setFileSize(double fileSize) {
        this.fileSize = fileSize;
    }

    public String getFormat() {
        return format;
    }

    public void setFormat(String format) {
        this.format = format;
    }

    public double getDiscountPrice() {
        return getPrice() * 0.9;
    }

    public void download() {
        System.out.println("Downloading \"" + getTitle() + "\" in " + format + " format (" + fileSize + " MB)...");
    }
}
```

```
}
```

```
public String toString() {  
    return "EBook [Title=" + getTitle() + ", Author=" + getAuthor()  
        + ", Price=" + getPrice()  
        + ", FileSize=" + fileSize + "MB, Format=" + format + "];"  
}  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        EBook [] library = new EBook[2];  
  
        library[0] = new EBook ("Java Mastery", "Dewi Programmer", 100000, 5.2, "EPUB");  
  
        library[1] = new EBook ("Pemrograman OOP", "Rizal Code", 85000, 4.8, "PDF");  
  
        for ( EBook e : library) {  
            System.out.println(e);  
            System.out.println("Diskon: " + e.getDiscountPrice());  
            e.download();  
        }  
    }  
}
```
